ARMOURED CARS

TACTICAL BRIEFING ON ARMOURED CARS

In the early stages of the game, armoured cars will form the only source of armoured fire support for your forces. Armoured cars can also operate as fast recon units, given orders to withdraw at the first sign of enemy units. The relatively small cost of these units means that you can have a fair number of them, and most are armed with at least enough fire power to destroy or at least damage anything up to a medium tank. Their light armour is an obvious weakness, as even the RPG-7 will destroy most armoured cars.

After you acquire some heavier units, light Armoured Cars should be used for recon, and should be considered expendable in order to gain valuable intelligence, indeed they may be able to travel vast distances in the interior giving their commander a good idea of the whereabouts of potential enemies. They are able to gather intelligence while in harms way, and still get away. With this in mind, it might be worth the risk of losing units to gain valuable intelligence.
